

# Working Group Proposal Form

Interested parties can propose a specification development effort by submitting this form via Email to the RosettaNet CEO and the RosettaNet IP Administrator.

**Working Group Title: Manufacturing Work in Process (WIP)–Phase 2**

## **Specification Development Effort Purpose.**

- Automation of inquiries and responses for work-in-process (WIP) on the manufacturing factory floor will enable better WIP visibility -- reducing inventories and allowing for more flexible operations.
- Development activity for the WIP process is already complete. This effort is focused on the revised 7B version of the process.

Value expected:

- Significant reduction of manual WIP status requests and reports.
- Deeper penetration of PIP<sup>®</sup> deployments into the supply chain

## **Specification Development Effort Expected Output.**

- To create RosettaNet Implementation Guides for the deployment of these PIPs in various business process scenarios (including the front end and the back end).
- To convert the WIP PIPs from segment 3D (3D8 & 3D9) to segment 7B (7B1 & 7B2) and validate the "new" PIPs.

*Include any known relationships or dependencies on other working groups or RosettaNet specifications.*

- Possibly, to accommodate the needs of the Work Order program as it pertains to WIP.
