

Working Group Proposal Form

Interested parties can propose a specification development effort by submitting this form via Email to the RosettaNet President and the RosettaNet IP Administrator.

Working Group Title: Material Release

Objectives and Deliverables

Validate and place into production PIP 4D1, Material Release business process, and integrate it into a customer managed replenishment model as defined by RosettaNet Collaborative Forecasting Milestone Program Phase 2.

Specification Development Effort Purpose

Enable the inventory consumer in maintaining lean inventories and narrow forecasting horizons. This strategy yields maximum flexibility to support volatile supply and demand requirements in the supply chain. The material release business process completes the end-to-end collaborative forecasting model stated above.

Specification Development Effort Scope

- All members are required to actively participate in the validation of PIP 4D1 in production. For the purposes of testing an end-to-end Collaborative Forecasting Model, other PIPs may be combined with the 4D1 to meet the partners' needs. The sponsors of the milestone will focus on the customer managed replenishment model which are: PIPs 4A4, 4A5 and 4D1
- All the PIPs selected to complement testing of PIP 4D1 must be published validated PIPs.

Out of Scope

- Validating PIPs other than 4D1. New requirements that add functionality to the existing business process of PIP 4D1 or any other PIP involved in the Collaborative Forecasting set of scenarios.

Specification Development Expected Output

- DTD version of PIP 4D1. (Initial Validation)
- Schema version of PIP 4D1. (Phase 2 validation)

Documentation and Implementation Support Expected Output

The supporting business and technical documentation to be developed by the program include:

- Frequently Asked Questions (FAQ) .doc
- Return on Investment calculations/parameters (ROI) .doc
- RosettaNet Implementation Guide (RIG) .doc
- Lessons learned and experiences with implementing each unique end-to-end Business process and the content will be integrated into the RIG.

Include any known relationships or dependencies to other working groups or RosettaNet specifications:

- None
