

Working Group Proposal Form

Interested parties can propose a specification development effort by submitting this form via Email to the RosettaNet CEO and the RosettaNet IP Administrator.

Working Group Title: Product Catalog Information

Specification Development Effort Purpose

Problem Statement

- Inconsistent delivery of product sales information to partners creates overheads in managing the data
- Eliminate manual processes associated with the distribution of data
- Review existing capabilities utilizing EDI transactions

This program seeks to exchange product information to enable buyers to manage the procurement of a specific item from a seller, thereby reducing costs throughout the supply chain by reducing key strokes, errors and the effort to publish & maintain product sales information.

The program will also provide the capability to automate the push of product sales information to partners.

Specification Development Effort Expected Output

- Modify the standard information format of the RosettaNet PIP 2A1 to permit a more effective and efficient transfer of product catalog information from one trading partner to another.
- Develop the following documentation
 - Introductory Process Overview
 - Sample business scenarios
 - RosettaNet Implementation Guide for PIP 2A1

Include any known relationships or dependencies on other working groups or RosettaNet specifications.

Monitored relationship with the Design Engineering Information program to ensure that the process development efforts do not overlap inappropriately.
